

<b>ID</b>	2237
<b>Curricular Unit</b>	Information Technologies
<b>Regent</b>	Rui Jorge Bértolo Lara Madeira Claudino
<b>Learning Outcomes</b>	<p>At the end of the course, students should be able to:</p> <ul style="list-style-type: none"> <li>- understand the fundamental concepts about sport organizations information systems; and technologies</li> <li>- understand the methodologies used to analyze and develop information systems;</li> <li>- apply the technologies used to build web based information systems;</li> </ul>
<b>Syllabus</b>	<ol style="list-style-type: none"> <li>1. Information technologies in the context of sports organizations             <ol style="list-style-type: none"> <li>1.1 Case studies at the Portuguese Football Federation and the Comité Européene de Rink-Hockey</li> </ol> </li> <li>2. General concepts of information systems and technologies             <ol style="list-style-type: none"> <li>2.1 Systems and information technologies</li> <li>2.2 Concept of data and information</li> </ol> </li> <li>3. Classification of technologies and information systems</li> <li>4. Information technologies to the web             <ol style="list-style-type: none"> <li>4.1 Web servers, databases and applications</li> </ol> </li> <li>5. Technologies of publishing documents on the web             <ol style="list-style-type: none"> <li>5.1 Hyper Text Markup Language</li> <li>5.2 Structure of an HTML document</li> </ol> </li> <li>6. Technologies of dynamic publishing documents on the web             <ol style="list-style-type: none"> <li>6.1 the Hypertext Preprocessor-PHP                 <ol style="list-style-type: none"> <li>6.1.1 Structure of a document</li> <li>6.1.2 Instructions, variables, and constants</li> </ol> </li> </ol> </li> <li>7. Database Technologies             <ol style="list-style-type: none"> <li>7.1 Notion of relational database</li> <li>7.2 Concept of table, record, and fields</li> </ol> </li> <li>8. SQL and databases             <ol style="list-style-type: none"> <li>8.1 The main SQL commands</li> </ol> </li> <li>9. Database Normalization             <ol style="list-style-type: none"> <li>9.1 Primary and secondary keys</li> <li>9.2 Data normalization</li> </ol> </li> <li>10 Use of spreadsheets</li> </ol>

The teaching is conducted through theoretical and practical classes, because many of the contents have a operational application component. The classes consist of an initial part, with an exhibition and theoretical component. In addition the students carry out practical exercises, as autonomous as possible, through practical sheets available in the online reserved area of the discipline.

## Evaluation

Two tests are performed online, through the corresponding functionality in the Agon web application. In addition students will have to perform autonomously, a practical work, which consists in developing a Web application, using HTML, PHP and MySQL. This work has an initial presentation in the course of lessons and a final presentation, after the completion of classes.

The students who do not realize the continuous assessment, previously presented, will have to perform a written test and an oral presentation about the whole matter.
