

ID	2246
ID	2246
Curricular Unit	Industrial Ergonomics
Regent	Maria Filomena Araújo da Costa Cruz Carnide
Learning Outcomes	<ol> <li>Mastery of concepts and conditions of own biomechanics and organizational exposure industrial context.</li> <li>Capacity to delineate an ergonomic analysis of specific working conditions conducive to the development of amendments to the health industry context.</li> <li>Mastery methodologies for integrated analysis of occupational exposure to biomechanical and organizational nature.</li> <li>The Domain selection and application of exposure assessment tools.</li> <li>Capacity for collecting, monitoring and analyzing data.</li> </ol>
Syllabus	<ol> <li>Principles of Industrial Ergonomics</li> <li>Characterization of the physical conditions of conducting the activity in industrial context</li> <li>Methodological approaches for assessing exposure</li> <li>Levels of exposure-response analysis: defining priorities</li> <li>Delimitation of study type</li> <li>Delimitation of the study population</li> <li>Definition of variables relevant study</li> <li>Definition of strategies of data collection</li> <li>Methods of exposure assessment (objectives, principles of application / how and when to apply, interpreting information and limitations)</li> <li>Subjective 4.1-Trial</li> <li>Psystematic observations (in situ and retrospectives)</li> <li>A direct-methods (in situ and laboratory)</li> <li>A sessment of the mechanical load by using direct methods of assessing the intensity, duration and frequency of muscle activation</li> <li>Integration of quantitative biomechanical parameters in numerical and qualitative explanatory models.</li> <li>Standards, recommendations and current programs on expos</li> </ol>
Evaluation	Continuous assessment : Theoretical-component - perform a writing frequency. The frequency must have a minimum grade of 9.5. -Practical component - making worksheets 2 of which must be evaluated. All entries must have a minimum grade of 9.5. The note of this component is 30% of the final mark. Final evaluation : • Conducting an examination consisting of a written, practical and oral test. The final grade is 70% of theoretical and practical component of 30%.
