

ID	3253
Curricular Unit	Physical Fitness for Young
Regent	Maria Helena Santa Clara Pombo Rodrigues
Learning Outcomes	The student must know the rates of physical activity and sedentary time among children and adolescents. To document the evidence of the physiological, metabolic and psychological benefits related to regular physical activity and exercise practice. To assess and teach exercise programs for children and adolescents, adapted to their morphological, physiological, psychological and socio-emotional differences. Paediatric physical fitness and physical activity assessments. The fitnessgram program. Expertise in exercise prescription for children and adolescents.
Syllabus	Epidemiological research related with rates of physical activity and sedentary time in children and adolescents. Benefits of regular physical activity and the consequences of physical inactivity among children and adolescents. The cardiovascular risk factors in children. Physiological responses to exercise. Paediatric laboratory exercise test and field physical fitness tests. Exercise prescription for children and adolescents. Guidelines for school and community programs to promote lifelong physical activity among young people. Supervised intervention with children and adolescents.
Evaluation	Students may opt either for final or continuous assessment. Continuous assessment - one written test during the course (60% of the final classification) and a group work (40% of the final classification). In each assessment task the student must have a classification equal or higher than 8 values. 1/3 class attendance. Final exam - written and oral examination at the end of the course. In each assessment task the student must have a classification equal or higher than 10 values.
